3 Step 2: Perform Elbow Method To Find Optimal No.Of Clusters

```
[16]: wcss = []
[17]: for i in range(1, 11):
          kmeans = KMeans(n_clusters=i, init="k-means++", random_state=0)
          kmeans.fit(x)
          wcss.append(kmeans.inertia_)
[18]: plt.figure(figsize=(12, 6))
      plt.grid()
      plt.plot(
          range(1, 11),
          wcss,
          color="green",
          linestyle="dashed",
          linewidth=3,
          marker="o",
          markerfacecolor="blue",
          markersize=12,
      plt.title("The Elbow Point Graph")
      plt.xlabel("Number of Clusters")
      plt.ylabel("WCSS")
      plt.show()
```

4 Training the K-Means Clustering Model

5 Checking the centers of out clusters (Also known as Centroids)

6 Visualizing all the clusters

```
s=100,
    c="black",
    label="Centroids",
    marker="*",
)

plt.title("Customer groups")
plt.xlabel("Annual Income")
plt.ylabel("Spending Score (1-100)")
plt.legend()

plt.show()
```
